

CAVY

Application walkthrough

EVERY SCREEN, FOR THE STUDENT, THE TEACHER AND THE ADMINISTRATOR

Measuring how people think with AI, not only what they hand in.

Group 04

- Viral Kariya
- Vanshika Ahuja
- Yashika Parmar
- Carol Maria

The idea in one page

Students now work with AI assistants every day, but a lab is still judged by its final code. Two students can hand in the same answer, one having reasoned with the AI and the other having pasted its reply. **CAVY (Cognitive Interaction Quotient)** makes that difference visible. Students solve programming labs in an environment where an AI assistant is available; the platform records, as a structured trail of events, how that help was used: what was asked, what was kept, what was changed, what was tested. From that trail it computes fourteen behavioural signals in three pillars, and a CIQ score for each session.

The student

Works through a lab in three stages, asks the AI for help, runs code, explains the idea in their own words, and then sees a score and a progress page that say what to do next.

The teacher

Chooses the courses they teach, sets labs for a group, shares resources, and reads each student's real work, AI chat and signals instead of a bare grade.

The administrator

Runs the classroom server in a browser: approved emails, users, courses and classes, email, lab mode, records and backups.

A note on the data in these pages. The screens were captured from the real application running on a throw-away database filled with demonstration students, labs and scripted AI replies, so scores look high and uniform. Nothing here comes from real students. The signals and the CIQ are research instruments whose validity on a real class is still to be tested (see the validation report in the repository).

What has changed since the first walkthrough

- **Lab mode.** Full screen, key lock, a focus rule (one warning, then automatic submission) and paste detection, switched on or off by the administrator.
- **Courses and classes.** Courses have an ID, a level, a department and years. Professors choose the courses they teach; students can be in several professors' classes.
- **Stages with Back and Next.** A lab is three stages done in order and submitted once at the end, with resources shown inside the workspace.
- **Follow-up and review.** Professors can edit follow-up assessments and read a student's submitted code, output and explanation.
- **AI choices.** Ollama, OpenAI, Claude, Gemini, Grok and Groq; a class AI set by a professor, or a student's own key kept only in memory.
- **Email onboarding.** First-login passwords and password-reset codes are emailed; the mail account is set up in the admin panel.
- **Operations.** Structured logging, a load benchmark (100 students at once, no failures) and installers for macOS and Windows.

Contents

6

1 · GETTING CONNECTED · SCREEN 3 OF 47

Connecting to a classroom server

On a lab computer, type the address the server shows (for example 192.168.1.20:8000). CAVY then uses the shared class data instead of this computer's own.

1 · GETTING CONNECTED · SCREEN 4 OF 47

Hosting a server on this computer

A teacher can start the classroom server from this screen. It shows the address to give to students. Most classes use the dedicated server and admin panel instead (see the administrator section).

2 · THE STUDENT'S LAB · SCREEN 5 OF 47

Student home: today's labs

Each card is a lab set by a professor for this student's course. Only labs that target the student's course, year, division and batch appear here.

The screenshot displays the 'Student home: today's labs' interface. At the top, a dark blue header contains the 'CAVY COGNITIVE INTERACTION QUOTIENT' logo on the left and a 'Profile R' button on the right. A dark blue sidebar on the left lists navigation options: 'Home' (selected), 'My Progress', 'Practice', 'Resources', and 'Profile'. The main content area has a light beige background. It features a section titled 'Today's Lab Sessions' with the subtitle 'Complete them to build your CIQ.' Below this, there are three lab cards. Card 01, 'Reversing a Linked List' by Dr. Kariya, is 'Ready to start' and has a 'Start' button. Card 02, 'Calculating Entropy' by Dr. Kariya, is also 'Ready to start' and has a 'Start' button. Card 03, 'Linked Lists: Reverse in Place' by Dr. Anita Rao, is 'In progress' and has a 'Continue' button. At the bottom, a white box with a dark blue icon asks 'Want to practice?' and provides a link to 'Open Practice'. The footer of the sidebar contains the text 'Better questions. A smarter you.'

2 · THE STUDENT'S LAB · SCREEN 6 OF 47

A lab and its three stages

A lab has three stages (Learning, Exploration, Assessment), each with its own AI-assistance level. Stages are done in order, the student can go back and forth, and the whole lab is submitted once at the end.

The screenshot displays the CAVY application interface. The top header shows the CAVY logo and 'COGNITIVE INTERACTION QUOTIENT' on the left, and a 'Profile' button with a user icon 'R' on the right. A dark sidebar on the left contains navigation links: Home, My Progress, Practice, Resources, and Profile. The main content area is titled 'Linked Lists: Reverse in Place' and features a progress bar with three stages: 1 Learning, 2 Exploration, and 3 Assessment. Below the progress bar, a text block explains the stage order and submission process. Three stage cards are listed, each with a number, title, AI Assistance level, and a 'Continue' button. Stage 1 is 'Learning' with 'Full assistance' and 'In progress' status. Stage 2 is 'Exploration' with 'Full assistance' and 'In progress' status. Stage 3 is 'Assessment' with 'Restricted assistance' and 'In progress' status. The bottom of the sidebar contains the text 'Better questions. A smarter you.'

2 · THE STUDENT'S LAB · SCREEN 7 OF 47

Lab mode: the rules, before the lab starts

If the administrator has switched lab mode on, the lab opens full screen. Leaving the window gives one warning; the second time the lab is submitted automatically. Pasting into the editor is recorded.

2 · THE STUDENT'S LAB · SCREEN 8 OF 47

The coding workspace

Left: the stages and any resources the professor shared. Centre: the problem and a code editor with Run, Reset, Save and Next buttons. Right: the AI assistant. A timer shows the time left in the stage.

The screenshot displays the CAVY (Cognitive Interaction Quotient) application interface. The top header shows the CAVY logo, the title "COGNITIVE INTERACTION QUOTIENT", a timer indicating "TIME REMAINING 26:45", an "End Session" button, and a user profile icon labeled "R".

The left sidebar contains navigation elements: a "Back to Lab" link, the current stage title "Linked Lists: Reverse in Place", a "STAGES" section with "Learning" (active), "Exploration", and "Assessment", and a "RESOURCES" section stating "Nothing has been shared with you yet."

The main workspace is titled "Linked Lists: Reverse in Place — Learning". It includes tags for "Learning", "Full assistance", "Difficulty: Medium", "Lab mode", "Est. Time: 30m", and a "Hide Description" button. The problem description is: "Implement a function that reverses a singly linked list in place, then explain why your solution works."

The central code editor shows a Python file named "main.py" with the following code:

```
def reverse(head):
    prev = None
    while head:
        nxt = head.next
        head.next = prev
        prev = head
        head = nxt
    return prev

print('reversed')
```

Below the code editor are buttons for "Run Code", "Reset", "Save", and "Next: Exploration →". The status bar at the bottom indicates "Python", "Ln —, Col —", "Spaces: 4", and "Not saved yet".

The right sidebar features the "AI Assistant" section, which is "Assistant ready". It includes tabs for "Chat" and "Examples". The assistant lists ways it can help: "Understanding the problem", "Explaining errors", "Suggesting approaches", and "Code examples". It also provides a prompt: "Try solving the task on your own first. Use me when you're stuck or want to verify your approach." Below this are several example questions: "How do I get started on this?", "Can you explain the error I'm seeing?", and "Is my approach on the right track?". At the bottom is an input field labeled "Ask anything..." with a send button and a disclaimer: "AI can make mistakes. Verify important information."

2 · THE STUDENT'S LAB · SCREEN 9 OF 47

Writing code, asking the AI, running it

Every edit, AI question, answer and run is recorded as an event. The output appears under the editor. Whether the student copied, edited or verified the AI's help is what CAVY later measures.

The screenshot displays the CAVY Cognitive Interaction Quotient interface. The top header shows the CAVY logo, session time (26:38), and an 'End Session' button. The left sidebar contains navigation links for 'Back to Lab', 'Linked Lists: Reverse in Place', and a list of stages (Learning, Exploration, Assessment). The main content area is titled 'Linked Lists: Reverse in Place — Learning' and includes buttons for 'Learning', 'Full assistance', 'Difficulty: Medium', 'Lab mode', 'Est. Time: 30m', and 'Hide Description'. A text box contains the instruction: 'Implement a function that reverses a singly linked list in place, then explain why your solution works.' Below this is a code editor with a Python file named 'main.py'. The code defines a 'reverse' function that iteratively reverses a singly linked list. The output of the code is shown as 'reversed'. To the right of the code editor is an 'AI Assistant' panel with a chat interface. The assistant is ready and has provided a helpful response to the user's question about reversing pointers without losing the rest of the list. The assistant suggests thinking about each step, using a 'prev' pointer, and trying the code first.

Linked Lists: Reverse in Place — Learning

Learning Full assistance Difficulty: Medium Lab mode Est. Time: 30m Hide Description

Implement a function that reverses a singly linked list in place, then explain why your solution works.

```
def reverse(head):
    prev = None
    while head:
        nxt = head.next
        head.next = prev
        prev = head
        head = nxt
    return prev

print('reversed')
```

Python Ln —, Col — Spaces: 4 Autosaved just now

Output: main.py

reversed

AI Assistant

Assistant ready

Chat Examples

You: How do I reverse the pointers without losing the rest of the list?

Assistant:

Think about what each step needs to remember. A loop that walks the list and keeps a `prev` pointer is enough. Try it yourself first, then run it and tell me what you see.

Ask anything...

AI can make mistakes. Verify important information.

2 · THE STUDENT'S LAB · SCREEN 10 OF 47

Moving to the next stage

Back and Next move between stages. Work is saved when leaving a stage, and each stage keeps its own code.

The screenshot displays the CAVY application interface. At the top, the header includes the CAVY logo, the text "COGNITIVE INTERACTION QUOTIENT", a timer showing "TIME REMAINING 27:40", an "End Session" button, and a profile icon labeled "R".

The left sidebar contains navigation options: "Back to Lab", "Linked Lists: Reverse in Place", "STAGES" (with "Exploration" selected), and "RESOURCES" (with a note "Nothing has been shared with you yet.").

The main content area is titled "Linked Lists: Reverse in Place — Exploration". It includes tabs for "Exploration", "Full assistance", "Difficulty: Medium", "Lab mode", "Est. Time: 30m", and a "Hide Description" button. Below the title, a text box states: "Implement a function that reverses a singly linked list in place, then explain why your solution works."

The central code editor shows the following Python code:

```
def reverse(head):
    prev = None
    while head:
        nxt = head.next
        head.next = prev
        prev = head
        head = nxt
    return prev

print('reversed')
# stage 2: tested an empty list
```

Below the code editor are buttons for "Run Code", "Reset", "Save", "Learning", "Next: Assessment", and a "Not saved yet" indicator.

On the right, the "AI Assistant" panel is active, showing "Assistant ready" and a list of topics it can help with: "Understanding the problem", "Explaining errors", "Suggesting approaches", and "Code examples". It includes a chat input field and a "Send" button.

2 · THE STUDENT'S LAB · SCREEN 11 OF 47

The Assessment stage

In the last stage the AI is restricted (here: restricted assistance). The button now says Submit Lab, and this is the only place a lab is submitted.

The screenshot shows the CAVY application interface during the Assessment stage of a lab. The top header displays the CAVY logo, the session title "COGNITIVE INTERACTION QUOTIENT", the time remaining "18:10", and buttons for "End Session" and "Profile". The left sidebar contains navigation links: "Back to Lab", "Linked Lists: Reverse in Place", "STAGES" (Learning, Exploration, Assessment), and "RESOURCES". The main content area is titled "Linked Lists: Reverse in Place — Assessment" and includes tabs for "Assessment", "Restricted assistance", "Difficulty: Medium", "Lab mode", "Est. Time: 20m", and "Hide Description". A text box contains the instruction: "Implement a function that reverses a singly linked list in place, then explain why your solution works." Below this is a code editor with a dark theme, showing Python code for reversing a linked list. The code includes a `reverse` function and test prints. The editor has buttons for "Run Code", "Reset", "Save", "Exploration", "Submit Lab", and a "Not saved yet" indicator. To the right of the code editor is an "AI Assistant" panel with a message stating "AI assistance is restricted during this stage" and a text input field for asking questions.

2 · THE STUDENT'S LAB · SCREEN 13 OF 47

Explain it in your own words

Before the lab closes, the student explains the idea behind their solution. This free-text answer is scored for conceptual understanding (signal S3.1) and is the evidence that separates understanding from copying.

The screenshot shows the CAVY Cognitive Interaction Quotient interface. At the top, the header includes the CAVY logo, the text "COGNITIVE INTERACTION QUOTIENT", a timer showing "TIME REMAINING 18:03", an "End Session" button, and a profile icon labeled "R".

On the left sidebar, there is a "Back to Lab" link, the title "Linked Lists: Reverse in Place", and a "STAGES" section with three items: "1 Learning", "2 Exploration", and "Assessment" (which is highlighted with a green circle). Below this is a "RESOURCES" section stating "Nothing has been shared with you yet."

The main content area is titled "Linked Lists: Reverse in Place — Assessment". It includes tags for "Assessment", "Restricted assistance", "Difficulty: Medium", "Lab mode", "Est. Time: 20m", and a "Hide Description" button. The instruction reads: "Implement a function that reverses a singly linked list in place, then explain why your solution works."

Below the instruction is a code editor with a Python solution for reversing a linked list. The code is as follows:

```
def reverse(head):
    prev = None
    while head:
        nxt = head.next
        head.next = prev
        prev = head
        head = nxt
    return prev

print('reversed')
# one more check
print('3 2 1')
```

Overlaid on the code editor is a modal dialog titled "Before you submit". It contains the text: "In your own words, explain the concept your solution relies on and why your approach works." Below this text is a text input field with the placeholder "Type your explanation here...". At the bottom of the modal are two buttons: "Skip" and "Submit Explanation".

At the bottom of the code editor, the output of the program is shown: "reversed" followed by "3 2 1".

On the right side of the interface, there is an "AI Assistant" section. It states "AI assistance is restricted during this stage" and includes a text input field with the placeholder "Ask anything..." and a send button.

At the bottom left of the interface, the text "Learn. Think. Collaborate. Grow." is displayed.

2 · THE STUDENT'S LAB · SCREEN 14 OF 47

3 · THE TEACHER'S VIEW · SCREEN 24 OF 47

Creating a lab

A lab has a title, a course, a year (and optionally division and batch to target one group), a topic, a difficulty and a problem description. The 'Draft with AI' button can write the description from the topic.

The screenshot shows the 'Create New Session' form in the CAVY application. The form is titled 'Create New Session' and includes a subtitle 'Set up a new lab with learning, exploration, and assessment stages.' The form is divided into several sections: 'Session Details', 'Course', 'Year', 'Batch', 'Topic', 'Division', 'Difficulty', and 'Description'. The 'Session Title' field contains 'Binary Search Trees: Insert and Search'. The 'Course' dropdown is set to 'B.Tech Computer Science (CRS-001)'. The 'Year' dropdown is set to 'Second Year'. The 'Batch' dropdown is set to 'Any batch'. The 'Topic' field contains 'Trees'. The 'Division' dropdown is set to 'Any division'. The 'Difficulty' dropdown is set to 'Medium'. The 'Description' field contains the text 'Build a binary search tree that supports insert and search. Explain the cost of each operation.' At the bottom of the form, there is a 'Draft with AI' button and a note: 'Write a few words about the problem first, or leave it empty to use just the title and topic.'

3 · THE TEACHER'S VIEW · SCREEN 29 OF 47

A student's progress (teacher view)

The professor opens any student in the class to see the same progress report the student sees: the CIQ over time, the three pillars, strengths and areas to grow.

3 · THE TEACHER'S VIEW · SCREEN 30 OF 47

A student's submitted work

For each stage the professor sees the code the student finished with and its output, so a score can always be checked against the actual work.

The screenshot displays the CAVY (Cognitive Interaction Quotient) interface. On the left is a dark blue sidebar with navigation links: Home, My Labs, My Class, Reports (highlighted), Resources, and Profile. The main content area has a light beige background. At the top right of the main area, there's a 'Profile' link and a circular icon with the letter 'D'. Below the navigation bar, there's a 'Back to progress' link. The student's name, 'Aarav Mehta', is prominently displayed, followed by their course details: 'Linked Lists: Reverse in Place · B.Tech Computer Science (CRS-001) · Second Year · Div A · Batch A1 · CIQ 100'. A dark blue 'Assessment' button is visible. Below this, the submission date and time are shown: 'Submitted 07/10/2026, 21:28:25 · 0 AI chats'. The code section, titled 'main.py', shows a Python function for reversing a linked list. The output section, titled 'Output of the last run', displays the result '3 2 1'. The explanation section, titled 'Explanation they wrote before submitting', contains the text: 'In your own words, explain the concept your solution relies on and why your approach works. I traced the pointers by hand, then ran it. Each node's next is flipped while prev moves forward.' At the bottom left of the sidebar, the text 'Teach. Assess. Create Impact.' is visible.

Create Impact.

3 · THE TEACHER'S VIEW · SCREEN 33 OF 47

Adding a follow-up assessment

A follow-up (a transfer task or a retention check) can be added to a lab to collect evidence of whether the learning transferred or lasted. It can be edited later and its work reviewed.

The screenshot displays the CAVY application interface. On the left is a dark sidebar with navigation links: Home, My Labs, My Class, Reports (highlighted), Resources, and Profile. The main content area shows a 'Linked Lists: Reverse in Place' lab for 'B.Tech Computer Science'. A modal titled 'Add Follow-Up Assessment' is open in the center. The modal contains the following fields:

- Kind:** A dropdown menu with the selected option 'Transfer Task (a different problem, same concept)'.
- Title:** A text input field containing 'e.g. Recursion Basics — Transfer Task'.
- Problem Description:** A large text area with the placeholder text 'Describe the task the student will attempt...'. Below it is a button labeled '+ Draft with AI'.
- AI Assistance:** A dropdown menu with the selected option 'Restricted'.
- Duration (minutes):** A text input field containing '20'.

At the bottom of the modal are 'Cancel' and 'Create' buttons. The background interface includes a top header with the CAVY logo and 'COGNITIVE INTERACTION QUOTIENT', a user profile icon, and a sidebar. The main content area also shows a table of student performance for the 'Linked Lists: Reverse in Place' lab, with columns for 'Student Name' and 'Status'. The table lists four students: Aarav Mehta, Diya Shah, Kabir Nair, and Rohan Das, all with a 'Submitted' status. A 'Follow-Up Assessment' section at the bottom of the main content area indicates that no follow-up assessments have been added yet.

3 · THE TEACHER'S VIEW · SCREEN 34 OF 47

Sharing a resource

Share a file, a link or written instructions with chosen courses, years, divisions or batches. Students see it on their Resources page and inside the lab workspace.

The screenshot shows the CAVY application interface. The top header includes the CAVY logo and the text 'COGNITIVE INTERACTION QUOTIENT'. The left sidebar contains navigation links: Home, My Labs, My Class, Reports, Resources (highlighted), and Profile. The main content area is titled 'Resources' and includes a sub-header 'Share files, links and instructions with your students, and attach them to labs.' A '+ Add resource' button is visible in the top right. A modal dialog titled 'Add a resource' is open in the center. The dialog has three tabs: 'File' (selected), 'Link', and 'Instructions'. It contains the following fields and options:

- Title:** A text input field.
- Description (optional):** A text input field.
- File (PDF, document, slides, image, data... up to 15 MB):** A section with a 'Choose file' button and the text 'No file chosen'.
- Who can see it:** Two radio button options: 'My whole class (5 students)' (selected) and 'Only selected students'.
- Attach to labs (optional):** Three checkbox options: 'Reversing a Linked List', 'Calculating Entropy', and 'Linked Lists: Reverse in Place'.

At the bottom of the modal are 'Cancel' and 'Add resource' buttons. The footer of the application contains the text 'Teach. Assess. Create Impact.'
